# BYU WSO2 Subscription Approval Process for APIs Tagged Restricted or Development

Notes:

Either a Business Owner or a Technical Owner can approve the subscription. The system uses the name and email address of the Business and Technical Owners listed as part of the API definition (could be an email list instead of an individual). If no emails are defined the system will email a WSO2 administrator to make sure the subscription request is not ignored.

The Dynamo DB JSON is updated with the current status of the request and other pertinent information as the process progresses and becomes a permanent record.
